Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contents

Preface.....	xi
Acknowledgment.....	xvii
Introduction.....	xix
1 Basic concepts and modeling aspects.....	1
1.1 Continuum theory and fluid flow.....	1
1.2 Flow in porous media.....	2
1.3 Rock properties.....	3
1.4 Fluid properties.....	6
1.5 Modeling of flow in porous media.....	10
1.6 Filtration theory.....	13
1.7 Nanoparticles transport with single-phase flow.....	14
1.8 Nanoparticles transport with two-phase flow.....	21
1.9 General model for different nanoparticles interval sizes.....	26
References.....	31
Further reading.....	32
2 Dimensional analysis and analytical solutions.....	33
2.1 Dimensional analysis.....	33
2.2 Analytical solutions.....	47
References.....	55
Further reading.....	56
3 Spatial numerical discretization methods for nanoparticles transport in porous media.....	57
3.1 Mesh generation.....	57
3.2 Cell-centered finite difference method.....	64
3.3 Shifting matrix method with MATLAB implementation.....	79
3.4 Finite element method.....	92
3.5 Mixed finite element method.....	97
References.....	104

4	Temporal numerical discretization schemes	105
4.1	Introduction	105
4.2	Forward and backward uler difference schemes	106
4.3	Courant–Friedrichs–Lewy stability condition	107
4.4	Multiscale time-splitting scheme	107
4.5	Relaxation factor	108
4.6	Implicit pressure implicit concentration scheme	108
4.7	Implicit pressure explicit saturation implicit concentration scheme	110
4.8	MATLAB code	113
4.9	Stability analysis of the IMPES method	120
	References	122
5	Iterative schemes and convergence analysis	125
5.1	Introduction	125
5.2	Iterative method for nanoparticles in single-phase flow	125
5.3	Iterative method for nanoparticles in two-phase flow	134
5.4	Numerical example	152
5.5	MATLAB code	156
	References	166
6	Nanoparticles transport in fractured porous media	169
6.1	Introduction	169
6.2	Dual-continuum approaches	170
6.3	Boundary conditions approach	173
6.4	Shape factor approach	174
6.5	Discrete fracture model	175
6.6	Hybrid embedded fracture model	188
	References	192

7 Nanoparticles transport in anisotropic porous media	195
7.1 Nature of the anisotropic porous media	195
7.2 Modeling of flow in anisotropic porous media	197
7.3 Nanoparticles transport in anisotropic porous media.....	199
7.4 Numerical methods for anisotropic porous media.....	200
7.5 Multipoint flux approximation	204
7.6 Numerical example	206
References	209
8 Magnetic nanoparticles transport in porous media	211
8.1 Introduction.....	211
8.2 Modeling of magnetic nanoparticles.....	212
8.3 Magnetic nanoparticles in single-phase flow	219
8.4 Magnetic nanoparticles in two-phase flow.....	220
8.5 Analytical solutions	229
References	239
Further reading.....	240
9 Nano-ferrofluids transport in porous media	241
9.1 Introduction.....	241
9.2 Properties of ferrofluids.....	242
9.3 Ferrofluids in single-phase flow	245
9.4 Analytical solutions	245
9.5 Nonisothermal ferrofluids transport in porous media	252
9.6 Ferrofluids transport in two-phase flow	259
References	264
10 Other nanoparticles transport interactions	267
10.1 Stability of nanoparticles suspensions.....	267
10.2 Nanoparticles with NAPL transport	267
10.3 Polymer transport under magnetic field in porous media ...	270
10.4 Nanoparticles with nonisothermal flow.....	277

X Contents

10.5 Nanofluids in boundary layer flow	283
References	301
11 Machine learning techniques for nanoparticles transport	303
11.1 Introduction.....	303
11.2 Machine learning techniques	304
11.3 Performance evaluation metrics	317
11.4 Datasets	318
11.5 Machine learning implementation	322
11.6 Hyperparameters tuning.....	323
11.7 Example of Jupyter Notebook implementation.....	325
11.8 Implementation of LR, k-NN, RF, SVR, GBR, and ANN method.....	336
References	337
12 Applications of nanoparticles in porous media	341
12.1 Introduction.....	341
12.2 Nanoparticles in enhanced oil recovery	341
12.3 Nanoparticles with heat transfer.....	345
12.4 Combination of nanoparticles and surfactants	346
12.5 Using nanoparticles in harvesting atmosphere water	347
12.6 Carbon dioxide capture by nanoporous materials.....	349
12.7 CO ₂ –nanoparticles sequestration in geological storages....	350
12.8 Nanofluids in metal hydride hydrogen storages.....	355
References	357
Further reading	359
 Index.....	 361
